Doddy.

Your mate in your pocket.

CHARACTER FIRST. PRODUCT SECOND.

Contents

One character. Many places.

Identity / Character / Typography / Colour / Motion / Product / Social / Handoff

Brand idea

A capable mate, not a know-it-all.

Doddy turns practical intelligence into a recognisable, accessible companion. Friendly and lively when appropriate; precise, careful and clear when it matters.

Promise

Useful first. Memorable always.

The character creates familiarity through content. The product earns repeat use through clear value, speed, honesty and follow-through.

The character-first route

Meet Doddy. Like Doddy. Use Doddy.

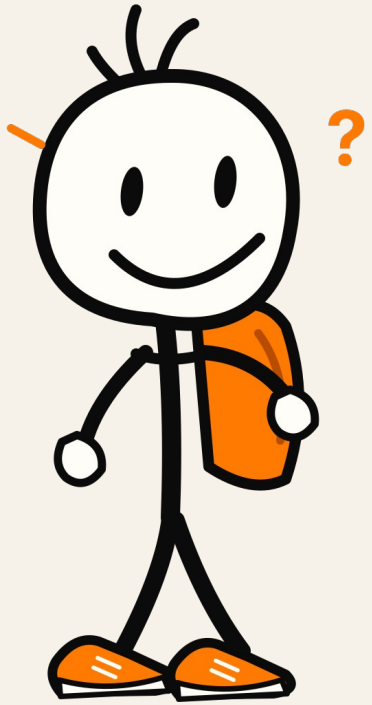

Short-form storytelling → recognition → product invitation → repeated useful moments. The brand never promises capabilities the app cannot deliver.

Five personality traits

Friendly. Capable. Playful. Curious. Reliable.

Cheeky is an accent, never the default. The interaction always prioritises the user’s context, consent and task.

What Doddy is / is not

A mate with judgment. Not a mascot with opinions.

YES: energetic, considerate, witty, helpful. NO: intrusive, childish, overconfident, sarcastic in sensitive situations.

Voice and tone

“Oi, what’s happening?”

Casual opening when appropriate. “Got it. Here’s what I found.” for competence. “That didn’t work. Want me to try another way?” when recovering from a failure.

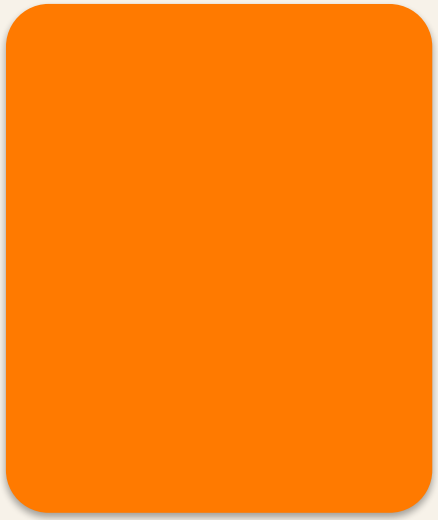

Context sets the tone

Humour is optional. Clarity is not.

In health, legal, financial, distress and safety contexts: calm, accurate, respectful; no jokes, false certainty or invented action confirmations.

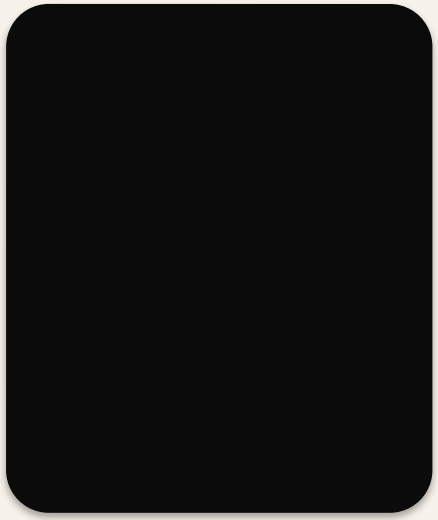

Primary colour palette

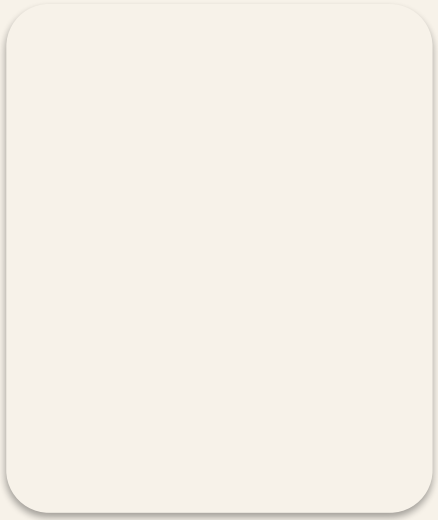

Doddy Orange

#FF7A00

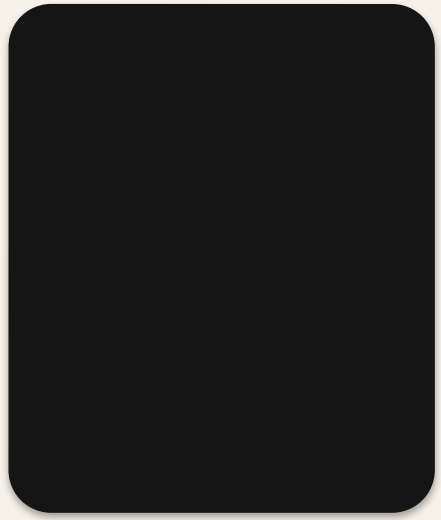

Ink Black

#0B0B0B

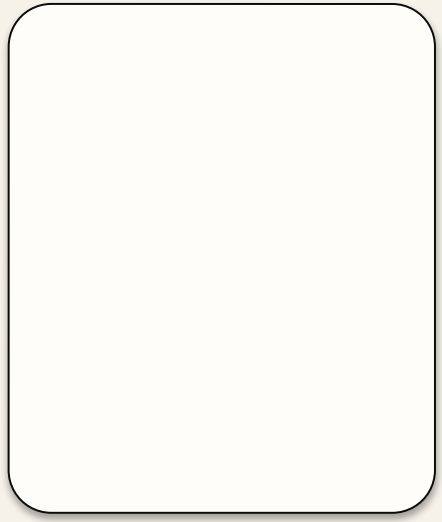

Warm Paper

#F7F2E9

Night

#151515

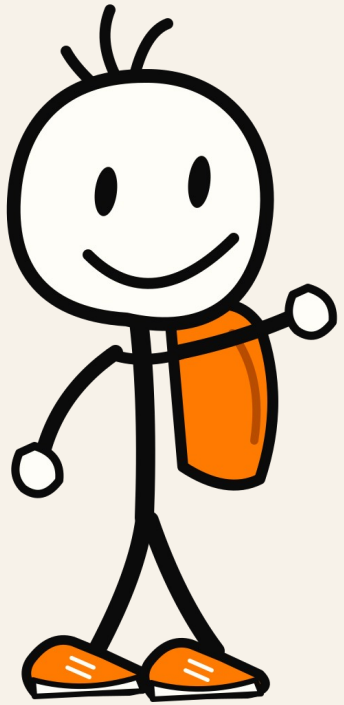

Paper White

#FFFDF7

Accessible contrast

Ink for words. Orange for energy.

On warm paper, use near-black for body copy. Orange is for distinctive marks, emphasis and sufficiently large display elements—not small text.

Typography system

Your mate in your pocket.

Inter Display Bold / Headline

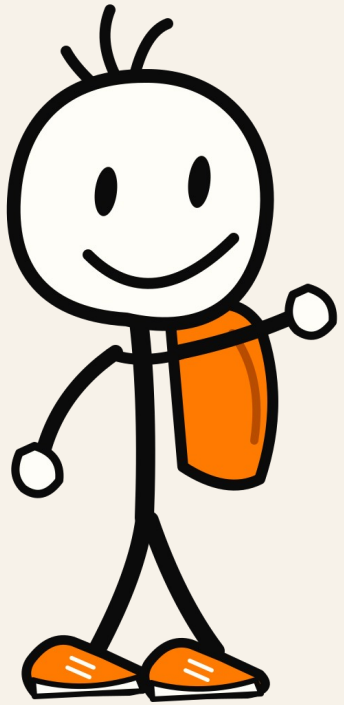

Inter / interface • body • labels

Custom hand-inked display lettering is an art direction, not a license-free font asset.

Type scale

One expressive voice. One readable system.

Hero 60/62 • H1 40/44 • H2 32/36 • H3 24/30 • Body 16/24 • Label 13/18. Illustration-like headlines should remain hand-crafted.

Logo system

Primary

Secondary

Reversed

Logo integrity

A marker, not a paragraph.

Use sufficient clear space equal to the character eye width. Never distort, add glow/shadows, set tiny slogans, or redraw the eyes inconsistently.

Character anatomy

Head — Organic, near-round; recognisable in tiny avatar.

Eyes — Two filled vertical ovals with deliberate asymmetry.

Smile — One curved, slightly off-centre stroke.

Body — Flexible ink line; minimal anatomy.

Accessories — Oversized trainers + backpack. Basketball optional.

Proportions and stroke

3 head-heights. One unmistakable face.

Character canvas: 420 × 580 units. Head ~185 units wide, core outlines 8–14 units. Rounded ink ends; imperfect but intentional geometry.

Orange Backpack

Character must-haves

Keep the face. Keep the shoes.

Round ivory head; black oval eyes; asymmetric smile; expressive three-stroke tuft; orange pack; oversized orange/white trainers. Hand-made energy at every scale.

Character restrictions

Never generic. Never shiny.

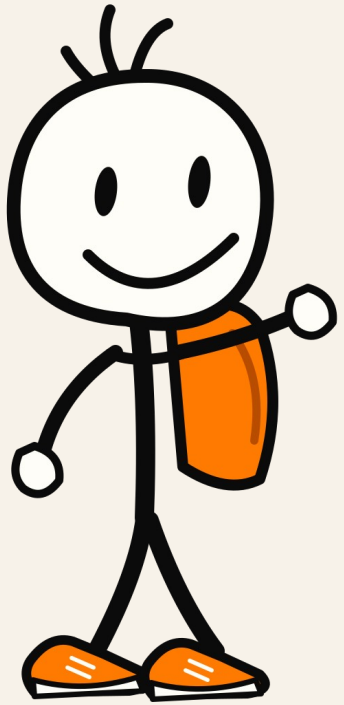

No 3D robots, polished gradients, detailed fingers, realistic hair, fluctuating head geometry or unapproved pupils. Orange supports identity, not every pixel.

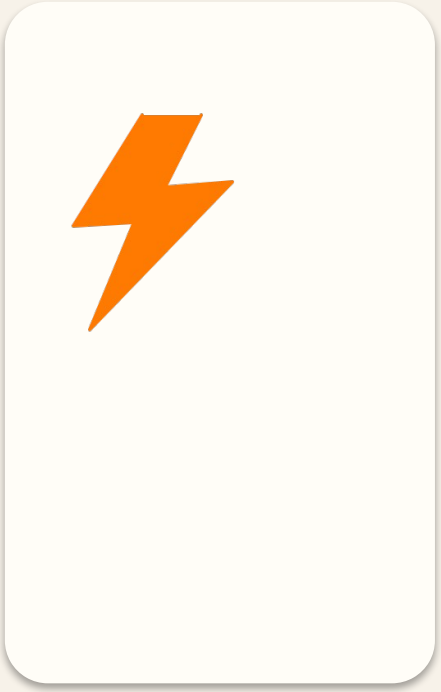

Adaptive assets

Full character → head → simplified glyph.

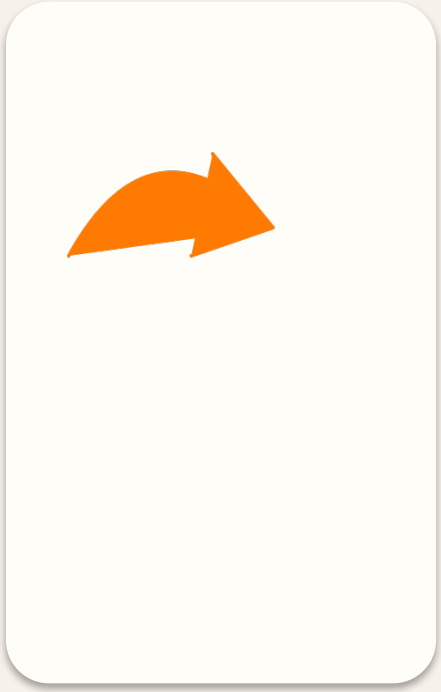

≥128 px: full body. 64–127 px: head and orange badge. 32–63 px: simplified head. <32 px: tested monochrome glyph. Validate actual pixel size.

Supporting graphic elements

Light and dark environments

The same mate. Different light.

Warm Paper supports illustration and content. Night Ink supports voice, ambience and cinematic moments. Preserve colour semantics in both.

App state / Home

Ready when you are.

A branded illustration supports the interface. Accessible labels and actual system state remain essential.

App state / Listening

Signal reflects real audio.

A branded illustration supports the interface. Accessible labels and actual system state remain essential.

App state / Thinking

Visible progress, not spinner theatre.

A branded illustration supports the interface. Accessible labels and actual system state remain essential.

App state / Speaking

The answer is the hero.

A branded illustration supports the interface. Accessible labels and actual system state remain essential.

App state / Action

Show the action stage accurately.

A branded illustration supports the interface. Accessible labels and actual system state remain essential.

App state / Error

Recover without blame or nonsense.

A branded illustration supports the interface. Accessible labels and actual system state remain essential.

Onboarding and permissions

Earn trust before asking for access.

Explain what Doddy can do and what he cannot read automatically. Back Tap requires user setup. Provide clear voice/memory/data controls.

System integration boundaries

Helpful within iOS rules.

Dynamic Island and Live Activities are system- and activity-scoped. Neither provides a permanent free-running mascot. Do not depict unsupported automation as shipped functionality.

Motion principles

Never teleport. Always explain state.

Invoke instantly; keep spatial continuity; listen to actual microphone data; allow interruptions; distinguish proposed versus completed actions.

Motion tokens

ACKNOWLEDGE	100–140 ms	Input received
ENTER	240–320 ms	Character arrival
THINK	220–320 ms	Processing/hand-off
SUCCESS	260–450 ms	Action completed
EXIT	180–260 ms	Surface recedes

State loop

Listen → understand → do → confirm.

An illustration is never proof of successful action. A task must explicitly move from intent to confirmation to verified result or recovery.

Reduce Motion

Meaning survives without movement.

Use short fades and explicit text labels when iOS Reduce Motion is enabled. No indefinite flashing, forced audio, or animated state-only signalling.

Instagram editorial templates

Repeatable editorial grid: headline + attitude + character behaviour + one clear idea.

Social at night

The same visual vocabulary, ready for nighttime storytelling and app launch moments.

Character storytelling

Let everyday problems carry the plot.

Set-up → minor problem → Doddy response → human moment → optional useful app moment. Keep stories worth watching before any product CTA.

Content-to-product conversion

Recognition is not retention.

Content introduces the mate. The app has to win on repeat tasks, memory consent, quick invocation and verified utility. Never use views alone as product proof.

Accessibility

Personality must remain legible.

Interface copy ≥16 pt default, reliable contrast, readable transcript, VoiceOver alternative labels, reduced motion, and no colour-only statuses.

Developer tokens

One JSON source of truth.

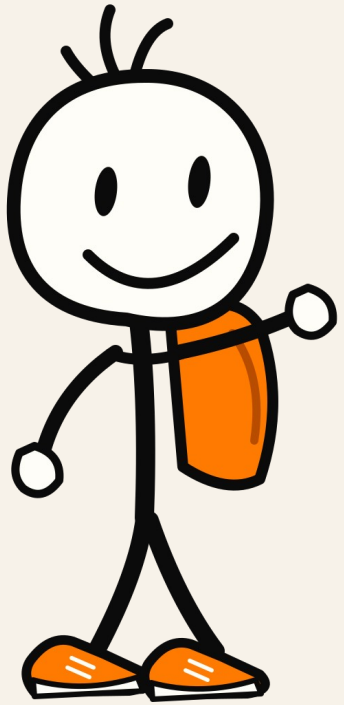

Brand swatches, radii, spacing and default motion durations ship as machine-readable JSON. Resolve semantic contrast at component level.

Export rules

Source SVG + practical PNG.

Source SVGs are editable vector geometry. PPTX copy and components are editable; raster illustration previews link to companion SVGs. Do not treat image previews as masters.

Naming and inventory

Make it easy to find the right Doddy.

Assets follow Doddy_<category>_<state>_<theme> naming. Every delivered asset is indexed in ASSET_INVENTORY.csv with SHA-256 and file size.

Release QA

Check actual assets. Not just mockups.

Verify consistent eyes, shoes, pack, background transparency, readable type, generated SVG parsing, GIF playback and PDF/PPTX page counts.

Approvals before brand freeze

The final artist pass matters.

3/4 character view, custom outlined wordmark, organic line-work and finished rig animations require specialist review. This v1.3 package is real and usable, not an unsupported claim of final sign-off.

Doddy.

Your mate in your pocket.
